

Before starting the workshop  
Please install **Git** in your system and also  
create an account in **github.com**

In case of problem, take help with  
volunteers.

# Workshop on Git and GitHub

---

AN INITIATION OF KUCC

# What is Version Control

---

- Software for developers to collaborate and maintain history of their work
- Without version control, people often use folders which is highly inefficient

# Why use this "Version Control"

---

- Allow developers to work simultaneously
- Do not allow overwriting each other's changes
- Maintains a history of each version
- Efficient and transparent (what, when and by whom)
- You can always Restore
- With Branching, you can experiment new features

# Introduction to Git

---

- Git is a Version Control Software
- Designed by Linus Torvalds
- Written in C
- Free and Open source

Let's Get Started

# Setting up Repository

---

- Git init
- Git config

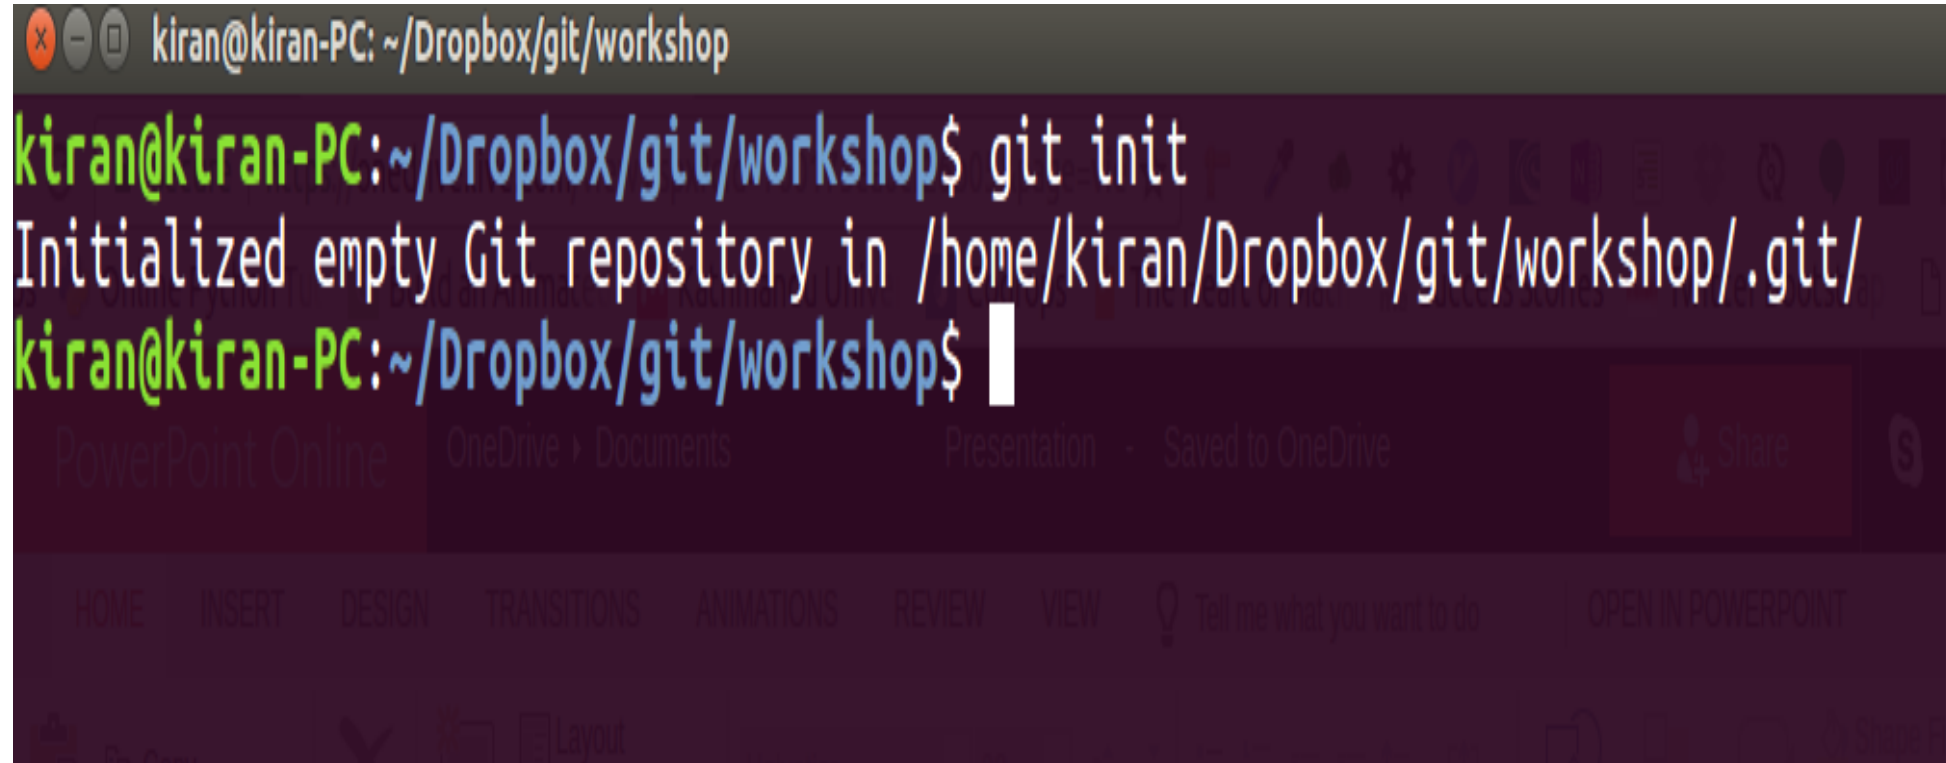

# git init

---

git init command creates a new Git repository.

## Usage

- git init

A screenshot of a terminal window with a dark background. The title bar at the top shows a red close button, a grey minimize button, and a grey maximize button, followed by the text 'kiran@kiran-PC: ~/Dropbox/git/workshop'. The terminal content shows the command 'git init' being entered at the prompt 'kiran@kiran-PC:~/Dropbox/git/workshop\$'. The output is 'Initialized empty Git repository in /home/kiran/Dropbox/git/workshop/.git/'. The prompt then changes to 'kiran@kiran-PC:~/Dropbox/git/workshop\$' with a white cursor. In the background, a Microsoft PowerPoint window is visible, showing the title 'Presentation - Saved to OneDrive' and a 'Share' button. The PowerPoint ribbon includes tabs for HOME, INSERT, DESIGN, TRANSITIONS, ANIMATIONS, REVIEW, and VIEW, along with a search bar and an 'OPEN IN POWERPOINT' button. The status bar at the bottom of the PowerPoint window shows 'Layout' and 'Shape' options.

```
kiran@kiran-PC: ~/Dropbox/git/workshop
kiran@kiran-PC:~/Dropbox/git/workshop$ git init
Initialized empty Git repository in /home/kiran/Dropbox/git/workshop/.git/
kiran@kiran-PC:~/Dropbox/git/workshop$
```

# git config

---

Used to set Git configuration values

## Usage

- `git config user.email "email"`
- `git config user.name "name"`

```
kiran@kiran-PC:~/Dropbox/git/workshop$ git config --global user.name "Kiran Kumar Chaudhary"
kiran@kiran-PC:~/Dropbox/git/workshop$ git config --global user.email "hellokiran2020@gmail.com"
kiran@kiran-PC:~/Dropbox/git/workshop$
```

# Saving Changes

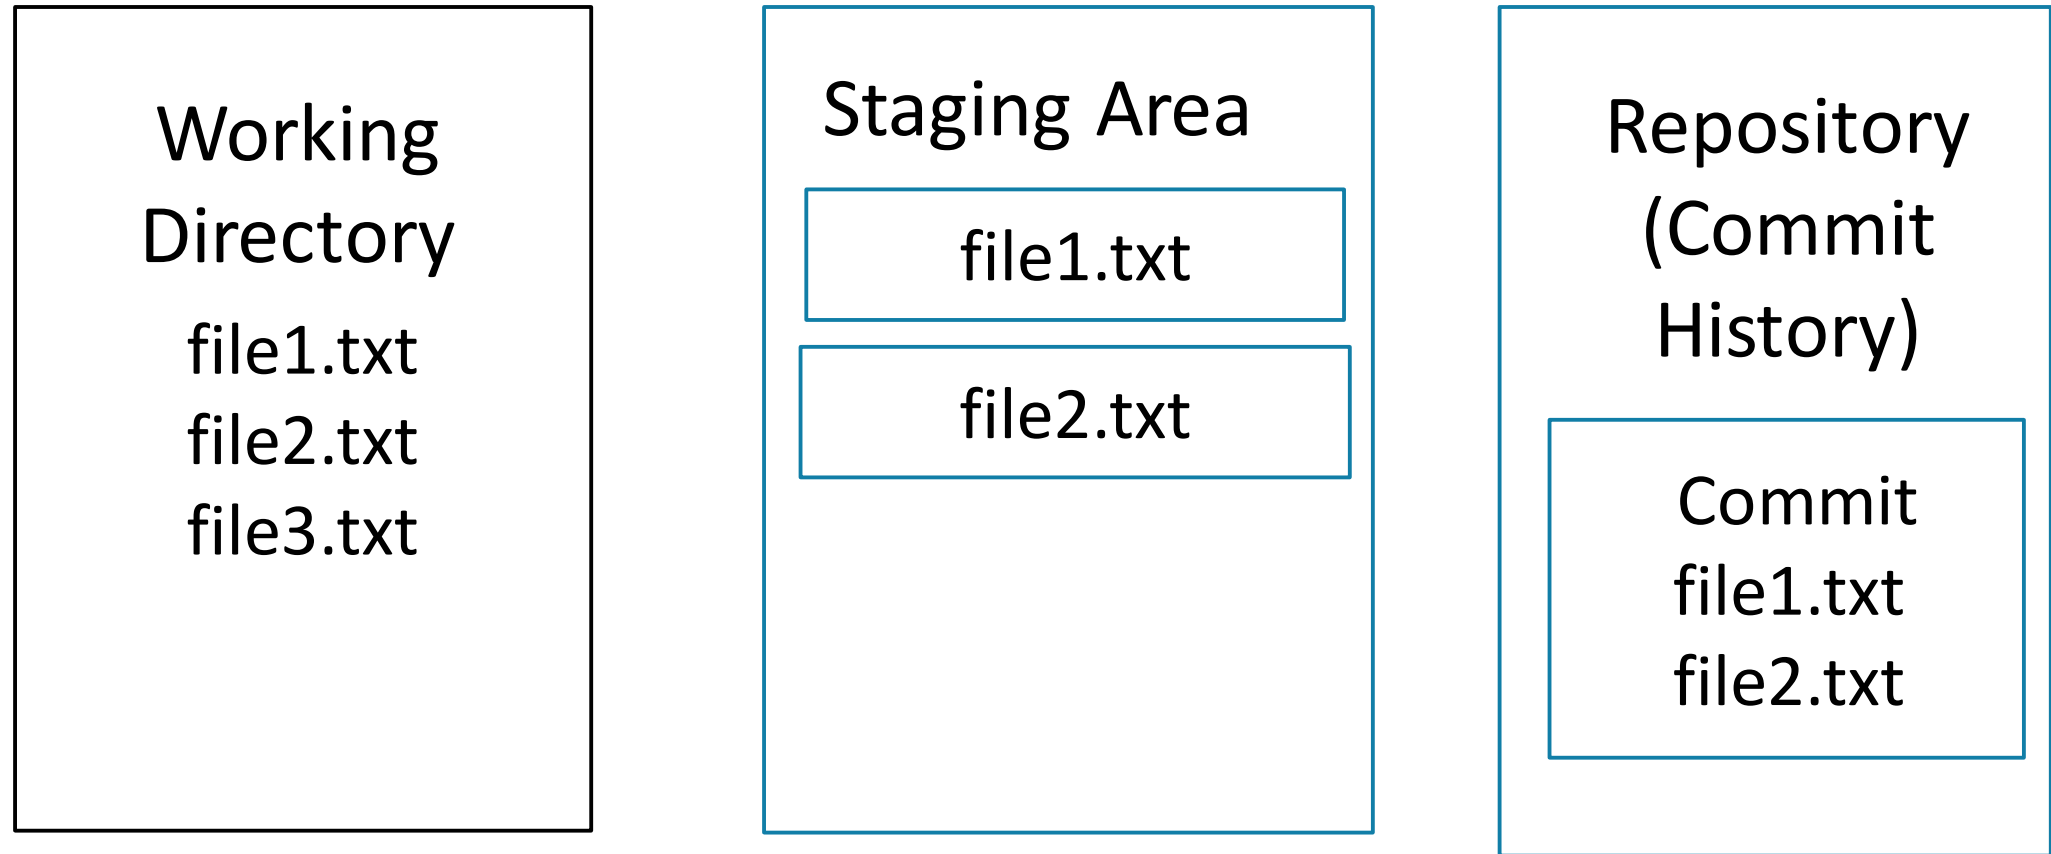

---

`git add`

`git commit`

# Choosing what changes to Commit

---

# git add

---

adds a change in the working directory to the staging area

doesn't really affect the repository

## Usage

- `git add <file>`
- `git add .`

# Let see in Action

---

```
kiran@kiran-PC:~/Dropbox/git/workshop$ git add file1.txt
```

```
kiran@kiran-PC:~/Dropbox/git/workshop$ git add file2.txt
```

```
kiran@kiran-PC:~/Dropbox/git/workshop$
```

# git commit

---

commits the staged snapshot to the project history(repository)

## Usage

- `git commit -m "commit message"`

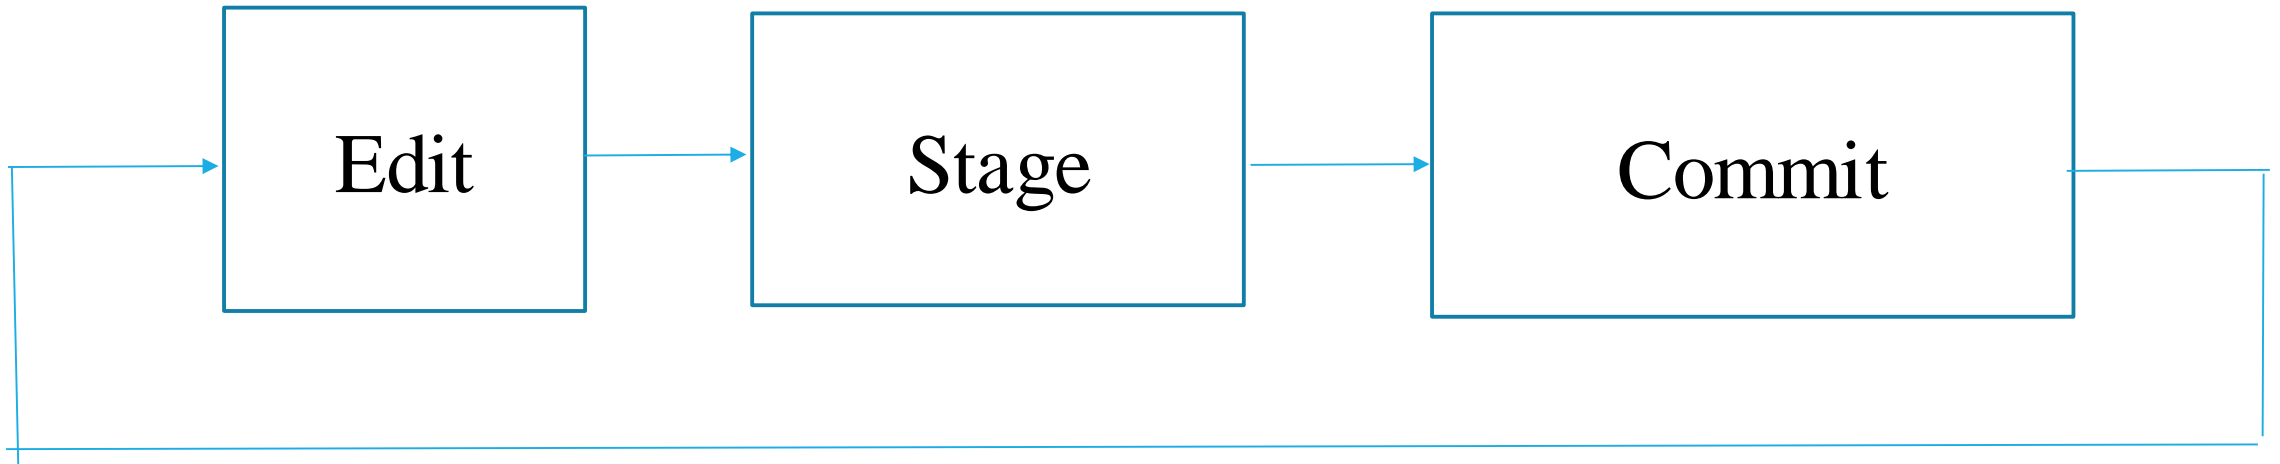

# In Action

---

```
kiran@kiran-PC:~/Dropbox/git/workshop$ git commit -m "file1.txt and file2.txt added."  
[master (root-commit) 2261a95] file1.txt and file2.txt added.  
2 files changed, 0 insertions(+), 0 deletions(-)  
create mode 100644 file1.txt  
create mode 100644 file2.txt  
kiran@kiran-PC:~/Dropbox/git/workshop$
```

# Workflow

---

# Inspecting a Repository

---

git status

git log

git diff

# git status

---

displays the state of the working directory and the staging area

see staged, unstaged, and untracked files by Git

## Usage

- git status

# In Action

---

```
kiran@kiran-PC:~/Dropbox/git/workshop$ git status
```

```
On branch master
```

```
Untracked files:
```

```
(use "git add <file>..." to include in what will be committed)
```

```
file3.txt
```

```
nothing added to commit but untracked files present (use "git add" to track)
```

```
kiran@kiran-PC:~/Dropbox/git/workshop$
```

# git log

---

displays committed snapshots

Usage

- git log

# In Action

---

```
kiran@kiran-PC:~/Dropbox/git/workshop$ git log
commit c7bc18aa371389568664f025cf6d9cc925c62d5e
Author: Kiran Kumar Chaudhary <hellokiran2020@gmail.com>
Date: Thu Jun 1 23:18:34 2017 +0545

    line 1 added in file1.txt

commit 2261a95087bcb10f8e2dabaf6b11b85c3d6767ef
Author: Kiran Kumar Chaudhary <hellokiran2020@gmail.com>
Date: Thu Jun 1 23:05:35 2017 +0545

    file1.txt and file2.txt added.

kiran@kiran-PC:~/Dropbox/git/workshop$
```

# git diff

---

compare files a/b

## Usage

- git diff

# In Action

---

```
kiran@kiran-PC: ~/Dropbox/git/workshop
kiran@kiran-PC:~/Dropbox/git/workshop$ git diff
diff --git a/file1.txt b/file1.txt
index 7928b34..fa3a725 100644
--- a/file1.txt
+++ b/file1.txt
@@ -1,1 @@
-1
+2
kiran@kiran-PC:~/Dropbox/git/workshop$
```

# Let's do some work

---

1. Change file2.txt. Add some line.
2. Run "git status" to see which file is modified.
3. Run "git diff" to see the difference between files.
4. Add the changes in Staging Area. Remember How?
5. Commit the Staged Snapshot in Commit history.

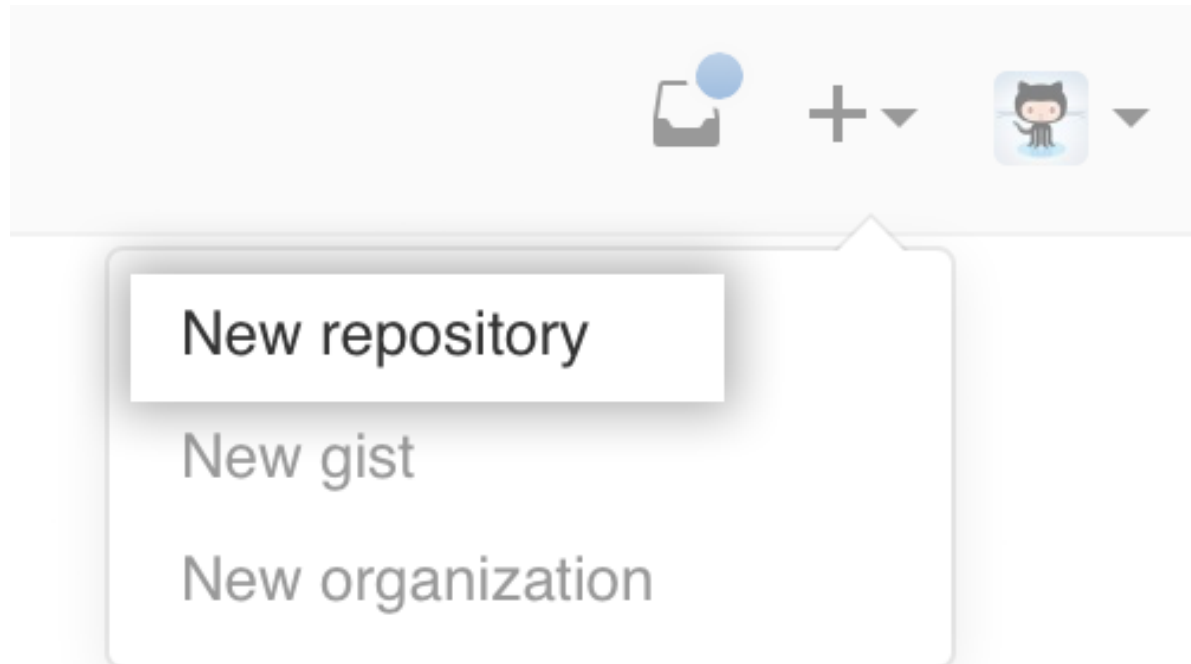

# GitHub

---

# creating repository

---

# git push

---

transfer the last commit(s) to a remote server

## Usage

- git init
- git add .
- git commit -m "Initial Commit"
- git remote add origin <https://github.com/Kiran995/kucc.git>
- git push -u origin branch\_name

# Workflow

---

# git clone

---

fetches all remote branches and creates one local branch

## Usage

- git clone <https://github.com/Kiran995/kucc.git>

# Git Branches
